

We want your chip fat!

Help your local school to win a solar panel or wind generator – fantastic eco-prizes for the schools that collect the most oil.

Waste cooking oil blocks drains, contaminates the environment and damages local wildlife eco-systems.

SAVE your used cooking oil from deep or shallow frying and simply drop it off at your local eco-school and we will transform it into environmentally-friendly bio-diesel.

User Guide

What sort of oil can I donate?

All waste vegetable oils including maize, olive, palm, rapeseed, soya, sunflower, safflower, sesame, almond, coconut, groundnut/peanut and walnut. Do not worry about small particles of chips or other food matter in the oil – this will be sieved out.

What sort of oil can't I donate?

Please do not donate cooking oil contaminated with water or large quantities of animal fat – it is not possible to turn this into bio-diesel. Strictly no engine oil, mineral oil, bath oil or cosmetic oil thank you.

Where's my local eco-school?

A large proportion of schools are now registered as eco-schools – call your nearest ones to check or visit the Magpie website for the full list of participating schools and their contact details.

When can I take the oil there?

Most schools will open their SLICK BIN for one day per half term – or about six times per year. Call them to find out dates for their SLICK BIN open days.

How should I bring the oil?

Please save your cooled oil in a screwtop plastic bottle no larger than 2 litres. No glass bottles or flip top lids thank you.

Full details of the Slick Schools scheme can be found on the Magpie website:
